

Electricity | Power transformers

Test categories

1

The 3 categories of tests according to IEC 60076

1

The 3 categories of tests according to IEC 60076

1

Routine tests

To be carried out systematically on every transformer manufactured

→ **Manufacturing validation**

2

Type tests

To be carried out on a transformer representative of other transformers (same factory, same manufacturing techniques, same materials)

→ **Design validation**

3

Special tests

A test other than an individual test or a type test

To be carried out under an agreement between the purchaser and the manufacturer

→ **Validation of a specific customer requirement**
